

My Fossil Assemblage - Grand Time Game

	Name of Organism (also sketch if you have time)	Era(s) (list)	"Habitat"	Energy Source	Began (ma*)	Ended (ma)
Round —						

Bonus points for the shortness of age range:

Latest "began" date (ma) of your four organisms)	
Earliest "end" date (ma) of your four organisms; enter zero if all organisms are still alive	
Subtract to get length of age range in millions of years:	
✓ if age range is less than 500	
✓ if age range is less than 100	
✓ if age range is less than 10	
Total bonus points: Count the number of check marks	

Summarizing activity: Write a paragraph describing your fossil assemblage, answering the following:

What are the names of the four organisms?

Within what range of time could the organisms have been alive together?

Could they have lived in the same habitat? Was it land or ocean?

Draw a food web summarizing a possible relationship between the organisms.

* "ma" stands for "million years". For "Began", copy the number on the card left of the era(s). For "Ended", copy the number to the right if there is one. Otherwise, the organism still exists, so place a dash under "Ended"
